Patches of dry skin?

No problem. Misty can easily and effectively target specific areas of dry skin to provide extra help, when and where it's needed!

Perfect **Partners**

TimeWise® Moisture Renewing Softener is the perfect partner product to use in your Misty device. Here's why:

- It's delicately light and deliciously hydrating
- It's age-fighting goodness at its beautiful best
- A mist applied before moisturiser preps the skin to drink in every vital drop

The Beauty of Misty

This neat, portable misty device ejects a mist of delicate moisturising particles. It scatters them evenly over the skin to impart exquisite hydration and leave skin feeling soft and supple. Misty can be sprayed directly onto skin or over make-up to freshen, rehydrate and revitalise.

Just how small is 'Nano'?

Nano particles are too small to be seen with the naked eye. To give you an idea: one nanometre is one-billionth of a meter, according to the International System of Units.

What exactly does MISTY do?

This portable misty device is the latest in skincare technology. It breaks down TimeWise® Moisture Renewing Softener into nano-sized moisturising particles. This improves saturation into the skin's basal layer making your skin feel softer, smoother and looking beautiful.

What are the benefits?

Say goodbye to dry, flaky skin... Misty takes skin hydration to the next level! The nano-particles absorb deeper into the skin leaving you looking radiant and feeling hydrated. You can even use it on top of your makeup, without smudging.
